The German tradition of landscape painting, the Danube school, was developed in the Danube valley in the 16th century. One of Claudio Magris's masterpieces is called Danube (ISBN 1-86046-823-3). The book, published in 1986, is a large cultural-historical essay, in which Magris travels the Danube from the very first sources to the delta, tracing ...

Danube - Wikipedia
The Danube ' s vast drainage of some 315,000 square miles (817,000 square km) includes a variety of natural conditions that affect the origins and the regimes of its watercourses. They favour the formation of a branching, dense, deepwater river network that includes some 300 tributaries, more than 30 of which are navigable.

Danube River | Location, Map, Countries, & Facts | Britannica
Danubian I peoples cleared forests and cultivated fertile loess soils from the Balkans to the Low Countries and the Paris Basin.They made LBK pottery and kept domesticated cows, pigs, dogs, sheep and goats.The characteristic tool of the culture is the shoe-last celt, a kind of long thin stone adze which was used to fell trees and sometimes as a weapon, evidenced by the skulls found at Talheim ...

systems. The old irrigation devices became out-of-date and depreciated, so the territory of irrigated lands decreased by the beginning of the 1980s. The sixth period extended from the change of regime to the present day. In 1990s water consumption was low. The usage of the resources was 10-15% nationwide. In the Danube-Tisza valley region –

IRRIGATION CONDITIONS OF THE DANUBE -TISZA RIVER VALLEY
The Danube Valley civilization is one of the oldest civilizations known in Europe. It existed from between 5,500 and 3,500 BC in the Balkans and covered a vast area, in what is now Northern Greece to Slovakia (South to North), and Croatia to Romania (West to East). During the height of the Danube Valley civilization, it played an important role in south-eastern Europe through the development of copper tools, a writing system, advanced architecture, including two storey houses, and the ...

Is the Danube Valley Civilization script the oldest ...
Serious drought periods hit the Danube region in 2003, 2007, 2011, 2012, 2015 and in the period of 2017-2020, affecting different water-dependent economic sectors, vegetation and the water resources. The estimated economic losses caused by the drought in 2017 in the Danube countries are more than 1 billion EUR.

Agriculture | ICPDR - International Commission for the ...
River capturing of the Danube by the Rhine River has reduced the length and flow of the Danube. The Danube River has had a huge economic, social and environmental impact on 10 European countries. However, with 10 countries sharing the river it has been difficult to manage and mitigate the risks and threats to the Danube River and its water quality. The Danube River basin was home to some of the world ' s earliest human cultures such as the Danubian Neolithic cultures including the Linear ...

Contributed articles worked and developed by ICID Working Group on History of Irrigation, Drainage, and Flood Control established in 1980.

This Book includes selected papers that has been published in the Water journal Special Issue (SI) on Water Supply and Water Scarcity. Moreover, an overview of the SI is included. The papers selected for publication in the SI include review and research papers on water history, on water management issues under water scarcity regimes, on rainwater harvesting, on water quality and degradation, and on climatic variability impacts on water resources. Overall, the issue identify and highlight the main challenges in water sector, and particularly in management and protection of water resources and in use of alternative (non-conventional) water resources, especially in areas with demographic change and climate vulnerability in order to achieve sustainable and secure water supply. Furthermore, general guidelines and possible solutions for an improved and sophisticated water management system are proposed and discussed, such as the adoption of advanced technological solutions and practices that improve water-use efficiency and the use of alternative water resources, to address the growing environmental and health issues and to reduce the emerging conflicts among water users.

Making Space for the River examines the recent developments in river management that aim to green rivers, including increasing river discharge for flood management, enhancing natural and landscape values, promoting local or regional economic development, urban regeneration.

Unsurpassed in the scope of its coverage, this book explores like no other the roles of policy entrepreneurs and the causes of policy change across diverse political systems ranging from the developing world to the largest western democracies. The studies show how entrepreneurs work with outside donors, take advantage of windows of political opportunity, create those windows, and push the policy process in the direction they hope. They also show the limits to these strategies, and strategies that tend to fail. The book dramatically advances our understanding not only of change and stability in water policy, but of the policy process more generally. Frank R. Baumgartner, University of North Carolina, US This book is a theoretically and empirically grounded analysis of one of the world s most pressing problems: the management of water resources. The editors have assembled a remarkable collection of authors with a truly global outlook and an excellent grasp of contemporary water issues as well as modern theories of public policy and decision-making. The volume also demonstrates excellent applications of policy theory to current and pressing matters. It is a must-read for students and practitioners in water resources and will be influential to water policy and in environmental resource management and policy for years to come. Thomas A. Birkland, North Carolina State University, US This volume is a major achievement. It advances our knowledge of stability and change in water policy through case studies from around the world. Its focus on transitions instances of really major shifts in policy is particularly welcome at a time when challenges such as climate change force water policy makers to reconsider the very foundations of their regulatory frameworks and infrastructural policies. The volume goes beyond water policy, however. It makes a major contribution to the study of policy dynamics in general by offering an empirically grounded comparative analysis of policy entrepreneurs as change agents in policy networks. There has been much loose talk about policy entrepreneurs in the fields of public administration and public policy, but a dearth of empirical work underpinning the various claims made. This volume goes a long way towards filling that gap. Highly recommended for water experts and policy scientists alike. Paul t Hart, Australian National University, Australia and Utrecht University, the Netherlands This major volume focuses on the role of policy entrepreneurs in revolutionizing water management worldwide. Adopting an international comparative perspective, the authors explore the changes taking place in water policy across fifteen countries, at both the global level and within the European Union. Their analysis highlights the importance of groups and individuals in stimulating progress and reveals the crucial part played by policy entrepreneurs. Successful entrepreneurs use various strategies to initiate and implement change, including the framing and reframing of issues, the assembly of coalitions, venue shopping and the exploitation of windows of opportunity. In showcasing the role of entrepreneurs in achieving transitions and explaining their approach, this groundbreaking book presents an optimistic message for those who desire improvements in the way water is managed. This book will not only make a unique contribution to the current literature on transition management, but will also prove an invaluable tool for those keen to influence water policy management at the regional, national and international level. It will be of great interest to students and scholars of water resources and environmental management and governance, as well as practitioners in the fields of water and climate policy.

Volume IV deals with the 'Middle Ages'. It starts with the expansion of Islam and closes with the discovery of the New World. Various events during this period led to a significant expansion in communications: the rapid spread of Islam and of Gengis Khan's Mongol Empire, as well as the Crusades and the development of trans-Saharan and maritime routes around Africa to the Indian Ocean, leading to multiplied exchanges between the peoples and cultures of Africa, Asia and Europe.
