You can add a checksum  
or hash to the file - if the  
file contents doesn't

# Access Free Document Id

agree with the checksum, you know it was tampered with.. If it is important that users can't read the contents of the file, you can encrypt it. I don't believe you can make a file that can't be tampered with (a savvy user could use a hex editor and change it, for example) - the best you can do is detect such tampering.
