A cognitive bias is a systematic pattern of deviation from norm or rationality in judgment. Individuals create their own "subjective reality" from their perception of the input. An individual's construction of reality, not the objective input, may dictate their behavior in the world. Thus, cognitive biases may sometimes lead to perceptual distortion, inaccurate judgment, illogical ...

~~Cognitive bias — Wikipedia~~

Explanations include information-processing rules (i.e., mental shortcuts), called heuristics, that the brain uses to produce decisions or judgments. Biases have a variety of forms and appear as cognitive ("cold") bias, such as mental noise, or motivational ("hot") bias, such as when beliefs are distorted by wishful thinking. Both effects can be present at the same time.

Heuristics are one source of biases. For example, the availability heuristic is a cognitive bias by which humans tend to rely on recent information far more than historical information.

~~Biases vs Heuristics — Simplicable~~

Heuristics are mental shortcuts we use to make problem-solving and decision-making easier. One type of heuristic is the affect heuristic, which specifically refers to how we can rely on our emotions when making decisions, which allows us to reach a conclusion quickly and without much effortful thought. Where this bias occurs
