Veronica St. John is facing the challenge of a lifetime. The media consultant has two days to teach a rugged Navy SEAL to impersonate a European prince who has been targeted by terrorists. It's a tough assignment, but Veronica is sure she's up to the task—until she actually meets Joe.

The material in this book was presented in the tutorial programme of the Eurographics '87 Conference, held in Amsterdam, The Netherlands, 1987. The book contains eight contributions, from leading experts in each field. Major aspects of computer graphics fundamentals, interactive techniques and three-dimensional modelling techniques are discussed and a state-of-the-art survey on the increasingly important area of desktop publishing is given. The theory of fractals is covered by presenting a thorough treatment of their mathematics and programming. Furthermore, overviews of several topics, such as the theory and methods of modelling three-dimensional shapes and objects, the fundamental concepts and current advances in user interface management systems, and existing CAD-interface specifications, are included. The book will be of interest to systems designers, application programmers and researchers who wish to gain a deeper knowledge of the state-of-the-art in the areas covered.

In an age of information and new media the relationships between remembering and forgetting have changed. This volume addresses the tension between loud and often spectacular histories and those forgotten pasts we strain to hear. Employing social and cultural analysis, the essays within examine mnemonic technologies both new and old, and cover subjects as diverse as U.S. internment camps for Japanese Americans in WWII, the Canadian Indian Residential School system, Israeli memorial videos, and the desaparecidos in Argentina. Through these cases, the contributors argue for a re-interpretation of Guy Debord's notion of the spectacle as a conceptual apparatus through which to examine the contemporary landscape of social memory, arguing that the concept of spectacle might be developed in an age seen as dissatisfied with the present, nervous about the future, and obsessed with the past. Perhaps now "spectacle" can be thought of not as a tool of distraction employed solely by hegemonic powers, but instead as a device used to answer Walter Benjamin's plea to "explode the continuum of history" and bring our attention to now-time.

The must-read summary of Jeff Howe's book: "Crowdsourcing: Why the Power of the Crowd is Driving the Future of Business". This complete summary of the ideas from Jeff Howe's book "Crowdsourcing" explains that " crowdsourcing " is the act of taking a task traditionally performed by a designated agent (such as an employee or a contractor) and outsourcing it by making an open call to an undefined but large group of people. In fact, crowdsourcing allows the power of the crowd to accomplish tasks that were once the province of just a specialised few. Or to put it another way, crowdsourcing is to take the principles which have worked for open source software projects and apply them right across the entire spectrum of the business world. Added-value of this book: • Save time • Understand the key concepts • Increase your business knowledge To learn more, read "Crowdsourcing" and discover why the power of the crowd is driving the future of business.

This book is the fruit of twenty-five years of study of Spinoza by the editor and translator of a new and widely acclaimed edition of Spinoza's collected works. Based on three lectures delivered at the Hebrew University of Jerusalem in 1984, the work provides a useful focal point for continued discussion of the relationship between Descartes and Spinoza, while also serving as a readable and relatively brief but substantial introduction to the Ethics for students. Behind the Geometrical Method is actually two books in one. The first is Edwin Curley's text, which explains Spinoza's masterwork to readers who have little background in philosophy. This text will prove a boon to those who have tried to read the Ethics, but have been baffled by the geometrical style in which it is written. Here Professor Curley undertakes to show how the central claims of the Ethics arose out of critical reflection on the philosophies of Spinoza's two great predecessors, Descartes and Hobbes. The second book, whose argument is conducted in the notes to the text, attempts to support further the often controversial interpretations offered in the text and to carry on a dialogue with recent commentators on Spinoza. The author aligns himself with those who interpret Spinoza naturalistically and materialistically.

Born and raised in Massachusetts, her family's home since the 1630s, Hannah Howell is the author of over thirty Zebra historical romances. Her love of history prompts the choice of venue, and also her dragging her husband Stephen, to every historical site she can get to. Her fascination with the past makes research as much a pleasure as a necessity. It was a thrill for her to turn her love of history and writing into a career, one that allows her to share those loves with others.

This is the first in-depth study of how the architectural profession emerged in early American history. Mary Woods dispels the prevailing notion that the profession developed under the leadership of men formally schooled in architecture as an art during the late nineteenth century. Instead, she cites several instances in the early 1800s of craftsmen-builders who shifted their identity to that of professional architects. While struggling to survive as designers and supervisors of construction projects, these men organized professional societies and worked for architectural education, appropriate compensation, and accreditation. In such leading architectural practitioners as B. Henry Latrobe, Alexander J. Davis, H. H. Richardson, Louis Sullivan, and Stanford White, Woods sees collaborators, partners, merchandisers, educators, and lobbyists rather than inspired creators. She documents their contributions as well as those, far less familiar, of women architects and people of color in the profession's early days. Woods's extensive research yields a remarkable range of archival materials: correspondence among carpenters; 200-year-old lawsuits; architect-client spat; the organization of craft guilds, apprenticeships, university programs, and correspondence schools; and the structure of architectural practices, labor unions, and the building industry. In presenting a more accurate composite of the architectural profession's history, Woods lays a foundation for reclaiming the profession's past and recasting its future. Her study will appeal not only to architects, but also to historians, sociologists, and readers with an interest in architecture's place in America today.

A handy reference for scriptures on the subject of prosperity from almost every book of the Bible. This will help believers understand God's will for prosperity.

People say 'love never dies'... but love might be the death of Seraphina. Seraphina has been alive since the Middle Ages, when her boyfriend, Cyrus, managed to perfect a method of alchemy that lets them swap bodies with any human being. She doesn't want to die, so she finds young people who are on the brink of death, and inhabits their bodies. When we meet Sera, she has landed in the body of a girl named Kailey who was about to die in a car accident. For the first time, Sera falls in love with the life of the person she's inhabiting. Sera also falls for the boy next door, Noah. And soon it's clear the feelings are returned. Unfortunately, she can never kiss Noah, because for her to touch lips with a human would mean the human's death. And she has even more to worry about: Cyrus is chasing her, and if she stays in one place for long, she puts herself -and the people she's grown to care for - in danger.
