Moon Phases for 2020 or any year with full moon and new moon times. When is the next full moon?

~~Moon Phases 2020 – Lunar Calendar~~
Preparing to explore the surface of the Moon goes well beyond designing and building safe spacecraft and spacesuits. NASA also has to ensure the surface vehicles and suits have the mobility required to do science, and that astronauts have the tools they need to identify and scoop up rock and soil samples.

~~Moon: NASA Science~~
Moon, Earth 's sole natural satellite and nearest large celestial body. Known since prehistoric times, it is the brightest object in the sky after the Sun. It is designated by the symbol ☽. Its name in English, like that of Earth, is of Germanic and Old English derivation.

Directed by Duncan Jones. With Sam Rockwell, Kevin Spacey, Dominique McElligott, Rosie Shaw. Astronaut Sam Bell has a quintessentially personal encounter toward the end of his three-year stint on the Moon, where he, working alongside his computer, GERTY, sends back to Earth parcels of a resource that has helped diminish our planet's power problems.

~~Moon (2009) - IMDb~~
The moon is a sphere that travels once around Earth every 27.3 days. It also takes about 27 days for the moon to rotate on its axis. So, the moon always shows us the same face; there is no single...

~~Full Moon Calendar 2020: When to See the Next Full Moon ...~~
The Moon (or Luna) is the Earth's only natural satellite and was formed 4.6 billion years ago around some 30–50 million years after the formation of the solar system. The Moon is in synchronous rotation with Earth meaning the same side is always facing the Earth.

~~Moon Facts - Interesting Facts about the Earth's Moon~~
The moon is the easiest celestial object to find in the night sky — when it's there. Earth's only natural satellite hovers above us bright and round until it seemingly disappears for a few nights.

~~Moon Facts: Fun Information About the Earth's Moon | Space~~
On December 4 the Moon is 18.61 days old. This refers to how many days it has been since the last New Moon. It takes 29.53 days for the Moon to orbit the Earth and go through the lunar cycle of all 8 Moon phases. The 8 Lunar Phases

Earth has just one moon — a rocky, cratered place, roughly a quarter the size of Earth and an average of 238,855 miles away. The Moon can be seen with the naked eye most nights as it traces its 27-day orbit around our planet. This page includes one or more 3D models that are loading

~~All About the Moon | NASA Space Place – NASA Science for Kids~~
Calendrical Blue Moon: The second full moon to occur in a calendar month. It takes our Moon about 29.5 days to complete one cycle of phases (from new Moon to new Moon), so if a full Moon occurs on the first of a month, there will be a second full Moon—a Blue Moon—at the end of the month, too (except in February).

The moon and Mars On Friday night, Oct. 2, the moon, just one day past its "Harvest Full Moon" phase, will appear to glide closely above the planet Mars.This dance will be a near facsimile of ...

~~Don't miss Mars and the nearly full moon huddling together ...~~
The Moon is Earth's only natural satellite and the fifth largest moon in the solar system. The Moon's presence helps stabilize our planet's wobble, which helps stabilize our climate. The Moon's distance from Earth is about 240,000 miles (385,000km). The Moon has a very thin atmosphere called an exosphere.

~~Overview | Earth's Moon – NASA Solar System Exploration~~
The moonlight we see on Earth is sunlight reflected off the Moon's grayish-white surface. The amount of Moon we see changes over the month — lunar phases — because the Moon orbits Earth and Earth orbits the Sun. Everything is moving. During a lunar eclipse, Earth comes between the Sun and the Moon, blocking the sunlight falling on the Moon.
