The bestselling nursing care planning book on the market, *Nursing Care Plans: Diagnoses, Interventions, and Outcomes*, 8th Edition covers the most common medical-surgical nursing diagnoses and clinical problems seen in adults. It includes 217 care plans, each reflecting the latest evidence and best practice guidelines. NEW to this edition are 13 new care plans and two new chapters including care plans that address health promotion and risk factor management along with basic nursing concepts that apply to multiple body systems. Written by expert nursing educators Meg Gulanick and Judith Myers, this reference functions as two books in one, with 147 disorder-specific and health management nursing care plans and 70 nursing diagnosis care plans to use as starting points in creating individualized care plans. 217 care plans --- more than in any other nursing care planning book. 70 nursing diagnosis care plans include the most common/important NANDA-I nursing diagnoses, providing the building blocks for you to create your own individualized care plans for your own patients. 147 disorders and health promotion care plans cover virtually every common medical-surgical condition, organized by body system. Prioritized care planning guidance organizes care plans from actual to risk diagnoses, from general to specific interventions, and from independent to collaborative interventions. Nursing diagnosis care plans format includes a definition and explanation of the diagnosis, related factors, defining characteristics, expected outcomes, related NOC outcomes and NIC interventions, ongoing assessment, therapeutic interventions, and education/continuity of care. Disorders care plans format includes synonyms for the disorder (for easier cross referencing), an explanation of the diagnosis, common related factors, defining

characteristics, expected outcomes, NOC outcomes and NIC interventions, ongoing assessment, and therapeutic interventions. Icons differentiate independent and collaborative nursing interventions. Student resources on the Evolve companion website include 36 of the book's care plans - 5 nursing diagnosis care plans and 31 disorders care plans. Three NEW nursing diagnosis care plans include Risk for Electrolyte Imbalance, Risk for Unstable Blood Glucose Level, and Risk for Bleeding. Six NEW health promotion/risk factor management care plans include Readiness for Engaging in a Regular Physical Activity Program, Readiness for Enhanced Nutrition, Readiness for Enhanced Sleep, Readiness for Smoking Cessation, Readiness for Managing Stress, and Readiness for Weight Management. Four NEW disorders care plans include Surgical Experience: Preoperative and Postoperative Care, Atrial Fibrillation, Bariatric Surgery, and Gastroenteritis. NEW Health Promotion and Risk Factor Management Care Plans chapter emphasizes the importance of preventive care and teaching for self-management. NEW Basic Nursing Concepts Care Plans chapter focuses on concepts that apply to disorders found in multiple body systems. UPDATED care plans ensure consistency with the latest U.S. National Patient Safety Goals and other evidence-based national treatment guidelines. The latest NANDA-I taxonomy keeps you current with 2012-2014 NANDA-I nursing diagnoses, related factors, and defining characteristics. Enhanced rationales include explanations for nursing interventions to help you better understand what the nurse does and why.

diagnoses, care plans on LGBTQ health issues and on electrolytes and acid-base balance, and a new Online Care Planner that makes it easier than ever to customize care plans. Written by noted educators Meg Gulanick and Judith L. Myers, this #1 care planning book will help you learn to think like a nurse! 61 patient problem care plans include the most common/important patient problems, providing the building blocks for you to create your own individualized care plans. 164 disorder care plans cover virtually every common medical-surgical condition, organized by body system. Patient problem care plan format includes a definition/explanation of the diagnosis, related factors, defining characteristics, expected outcomes, ongoing assessment, and therapeutic interventions. Disorder care plan format covers synonyms for the disorder (for ease in cross referencing), a definition, common related factors, defining characteristics, expected outcomes, ongoing assessment, and therapeutic interventions for each relevant nursing diagnosis. Prioritized care planning guidance internally organizes care plans from "actual" to "risk" diagnoses, from general to specific interventions, and from independent to collaborative/interprofessional interventions, to help you select the most important, priority interventions for your particular patients. NEW! Updated care plans are now based on the evidence-based, complete, and internationally accepted International Classification of Nursing Practice (ICNP®) nursing diagnoses. NEW! 19 all-new care plans are featured in this edition. NEW! Updated content throughout reflects the most current evidence-based practice and national and international guidelines. NEW! Online Care Planner on the Evolve website allows you to easily generate customized care plans based on the book's content. NEW! Improved focus on core content includes several care plans that have been moved from the book's Evolve website.

Read Book Nursing Care Plan Acute Pain

"Nursing Care Plans" includes 195 care plans for commonly encountered clinical problems in medical-surgical nursing. Written for students and/or clinicians, this book reflects the most current practice and professional standards in nursing, yet its level and format are student friendly.

The purpose of the study was to identify NANDA - I diagnoses, NOC outcomes, and NIC interventions used in nursing care plans for ICU patient care and determine the factors which influenced the change of the NOC outcome scores. This study was a retrospective and descriptive study using clinical data extracted from the electronic patient records of a large acute care hospital in the Midwest. Frequency analysis, one-way ANOVA analysis, and multinomial logistic regression analysis were used to analyze the data. A total of 578 ICU patient records between March 25, 2010 and May 31, 2010 were used for the analysis. Eighty - one NANDA - I diagnoses, 79 NOC outcomes, and 90 NIC interventions were identified in the nursing care plans. Acute Pain - Pain Level - Pain Management was the most frequently used NNN linkage. The examined differences in each ICU provide knowledge about care plan sets that may be useful. When the NIC interventions and NOC outcomes used in the actual ICU nursing care plans were compared with core interventions and outcomes for critical care nursing suggested by experts, the core lists could be expanded. Several factors contributing to the change in the five common NOC outcome scores were identified: the number of NANDA - I diagnoses, ICU length of stay, gender, and ICU type. The results of this study provided valuable information for the knowledge development in ICU patient care. This study also demonstrated the usefulness of NANDA - I, NOC, and NIC used in nursing care plans of the EHR. The study shows that the use of these three terminologies encourages interoperability, and reuse of the data for quality improvement or effectiveness studies.
