Kim has written a truly excellent introduction to the philosophy of mind. It is a book that many other writers of philosophical introductions could learn from - it is deep enough but does not pretend or try to cover everything, it is sufficiently broad, and most of all it is well written.

Written mainly with the student and general reader in mind, this book explores the nature of conscious intelligence in a concise and straightforward fashion. It tackles the subject using material from a variety of related fields—philosophy, psychology, artificial intelligence, neuroscience, ethology, and evolutionary theory. Exploiting this unusually broad perspective, it provides a fresh description of the major issues in the current philosophical/scientific debate, a comprehensive discussion of the competing philosophical theories and methodological approaches, and an up-to-date outline of the most important theoretical arguments and empirical data. Following an introduction, chapters cover the ontological problem (the mind-body problem), the semantical problem, the epistemological problems (self-awareness and other minds), the methodological problem, and computers and artificial intelligence. There is a substantial chapter on the several neurosciences. A concluding chapter speculates on the distribution of intelligence in the universe, and on the possible expansion of human introspective consciousness.

In this lively and entertaining introduction to the philosophy of mind, Edward Feser explores the questions central to the discipline; such as 'do computers think', and 'what is consciousness'; and gives an account of all the most important and significant attempts that have been made to answer them.

Philosophy of Mind: A Contemporary Introduction is a comprehensive and accessible survey of main themes, positions and debates in philosophy of mind. John Heil introduces and discusses the major topics in succinct, user-friendly, self-contained chapters: \* Cartesian dualism \* Descartes's legacy \* non-Cartesian dualism \* behaviorism \* the identity theory \* functionalism \* the representational theory of mind \*

qualia \* radical interpretation \* the intentional stance \* eliminativism \* property dualism \* mind and metaphysics \* the mind's place in nature This revised and updated edition includes expanded chapters on eliminativism, qualia, and the representational theory of mind, and an entirely new chapter on property dualism. There are annotated suggestions for further reading at the end of each chapter, updated to include recent material and internet resources.

When first published, John Heil's introduction quickly became a widely used guide for students with little or no background in philosophy to central issues of philosophy of mind. Heil provided an introduction free of formalisms, technical trappings, and specialized terminology. He offered clear arguments and explanations, focusing on the ontological basis of mentality and its place in the material world. The book concluded with a systematic discussion of questions the book raises--and a sketch of a unified metaphysics of mind--thus inviting scholarly attention while providing a book very well suited for an introductory course. This Third Edition builds on these strengths, and incorporates new material on theories of consciousness, computationalism, the language of thought, and animal minds as well as other emerging areas of research. With an updated reading list at the end of each chapter and a revised bibliography, this new edition will again make it the indispensable primer for anyone seeking better understanding of the central metaphysical issues in philosophy of mind.

Philosophy of Mind: Classical and Contemporary Readings is a grand tour of writings on the perplexing questions about the nature of the mind. The most comprehensive and best-selling collection of its kind, the book includes selections that range from the classical contributions of Descartes to the leading edge of contemporary debates. Extensive sections cover foundational issues, the nature of consciousness, and the nature of mental content. Three of the selections are published for the first time, while many other articles have been revised especially for this volume. Each section opens with an introduction by the editor.

Breaking new ground in the debate about the relation of mind and body, David Armstrong's classic text - first published in 1968 - remains the most compelling and comprehensive statement of the view that the mind is material or physical. In the preface to this new edition, the author reflects on the book's impact and considers it in the light of subsequent developments. He also provides a bibliography of all the key writings to have appeared in the materialist debate.

The unifying theme of these thirteen essays is understanding. Haugeland addresses mind and intelligence; intelligibility; analog and digital systems and supervenience; presuppositions about the foundational notions of intentionality and representation; and the essential character of understanding in relation to what is understood.

An updated edition of a comprehensive study of the theory that mind exists, in some form, in all living and nonliving things. In *Panpsychism in the West*, the first comprehensive study of the subject, David Skrbina argues for the importance of panpsychism—the theory that mind exists, in some form, in all living and nonliving things—in consideration of the nature of consciousness and mind. Panpsychism, with its conception of mind as a general phenomenon of nature, uniquely links being and mind. More than a theory of mind, it is a meta-theory—a statement about theories of mind rather than a theory in itself. Panpsychism can parallel almost every current theory of mind; it simply holds that, no matter how one conceives of mind, such mind applies to all things. After a brief discussion of general issues surrounding philosophy of mind, Skrbina examines the panpsychist views of philosophers from the pre-Socratics to the post-structuralists. The original edition of *Panpsychism in the West* helped to reinvigorate a neglected and important aspect of philosophic thinking. This revised edition offers expanded and updated material that reflects the growth of panpsychism as a subdiscipline. It covers the problem of emergence of mind from a non-mental reality and the combination problem in greater detail. It offers expanded coverage of the pre-Socratics and Plato; a new section on Augustine; expanded discussions of Continental panpsychism, scientific arguments, Nietzsche, and Whitehead; and a new section on Russellian monism. With this edition, *Panpsychism in the West* will be continue to be the standard work on the topic.

David Braddon-Mitchell and Frank Jackson's popular introduction to philosophy of mind and cognition is now available in a fully revised and updated edition. Ensures that the most recent developments in the philosophy of mind and cognitive science are brought together into a coherent, accessible whole. Revisions respond to feedback from students and teachers and make the volume even more useful for courses. New material includes: a section on Descartes' famous objection to materialism; extended treatment of connectionism; coverage of the view that psychology is autonomous; fuller discussion of recent debates over phenomenal experience; and much more.
