Swords and Shields. Faith and Magic. Grab your weapons and prepare,
for the enemy is on the move. High fantasy and mighty conflicts go
hand-in-hand. In great wars, armies rise to fight evil hordes and
heroes struggle to push beyond their imperfections to save the day.
These stories include more than just epic landscapes and

characters—they also feature epic battles. Imagine a doctor struggling to identify the spy who has infiltrated his company's ranks and poisoned his colleagues or a boy suspected of murder by a king yet protected by a princess as he helps her father against his own people. Imagine a butcher discovering that he's called to lead an uprising, or a First Born knowing that she must betray her own in order to save humanity. The possibilities are endless, but at the heart they have this in common: soldiers³ordinary and otherwise_struggling against extraordinary odds to survive the day. They must withstand dark magic, dodge enemy blades, and defy the odds to survive SHATTERED SHIELDS. Contributors: Larry Correia Sarah A. About Shattered Shields: "An inventive and thought-provoking set of tales that capture the bravery and terrors of battle. Carries the banner of military fantasy proudly."--John Marco, author of The Bronze Knight Series About The Raygun Chronicles edited by Bryan Thomas Schmidt: "Fans of sf should enjoy this stylistically varied homage to a genre as old as the fiction . . ."--Library Journal About Beyond the Sun edited by Bryan Thomas Schmidt: "Beyond the Sun mixes courage,

redemption, and stark terror in tales of distant worlds. Buckle
in."--Jack McDevitt, author of Firebird

Anyone can recycle a plastic bottle by tossing it into a bin, but it takes a bit of skill to propel it into that bin from 500 feet away. Skill, and a copy of Soda-Pop Rockets. Author and engineer Paul Jarvis has designed 20 different easy-to-launch rockets that can be built from discarded plastic drink bottles. After learning how to construct and fly a basic model, readers will find out new ways to modify and improve their designs, including built-on fins, nosecones, and parachutes that enable a rocket to float safely back to earth. More complex designs include two-, three-, and five-bottle rockets, gliding rockets, long-tail rockets, cluster rockets, whistling rockets, ring-finned rockets, and a jumbo version made from a five-gallon water-cooler tank. Clear, step-by-step instructions with full-color illustrations accompany each project, including how to build a launch pad, along with photographs of the author firing his creations into the sky. For those determined to find an educational benefit to their tinkering, these rockets are a clear demonstration of Newton's Third Law. Soda-bottle rockets can even be used as science fair projects by budding engineers. You don't have to be a rocket scientist to build them, but who knows what career path you'll take after you do?

The book explores the notion of soft power as set of theoretical arguments about power, and as a reflection of how each country perceives what is an increasingly necessary perspective on international relations in an age of ubiquitous global communication flows and encroaching networks of non-state actors. Soft power is discussed a means by which public diplomacy is justified and in the process, reflects arguments for how each state sees what is possible through soft power.

Considering both making political performance and making performance politically, this collection explores engagements of political resistance, public practice and performance media, on various scales of production within structures of neoliberal and liberal government and power.
