Land is perhaps the most important economic asset; women account for only 12.8 per cent of agricultural landholders in the world. Women and girls suffer most from the dearth of safely managed water and sanitation. Women and girls are responsible for water collection in 80 per cent of households without access to water on premises. Menstrual hygiene management is difficult in the absence of water, soap and gender-responsive sanitation facilities, whether at home, school or work.

Gender inequality comes at a significant economic cost as it hinders productivity and economic growth globally, countries are losing \$160 trillion in wealth because of differences in lifetime earnings between women and men. In addition, an IMF staff note paper showed that the obstacles to women entering the labour market have more economic cost than was believed to be the case, and benefits from reducing the barrier of gender inequality are likely to be larger than initially thought.

Women's economic empowerment is affected by economic policies, including how governments raise and spend taxes, and shape trade and investment deals. This is because these policies have a direct impact on the quality and availability of public services, which women are dependent on because of their unpaid care work, and which are vital in tackling violence against women and girls .

The transformation of women's lives over the past century is among the most significant and far-reaching of social and economic phenomena, affecting not only women but also their partners, children, and indeed nearly every person on the planet. In developed and developing countries alike, women are acquiring more education, marrying later, having fewer children, and spending a far greater amount of their adult lives in the labor force. Yet, because women remain the primary caregivers of children, issues such as work-life balance and the glass ceiling have given rise to critical policy discussions in the developed world. In developing countries, many women lack access to reproductive technology and are often relegated to jobs in the informal sector, where pay is variable and job security is weak. Considerable occupational segregation and stubborn gender pay gaps persist around the world. The Oxford

Handbook of Women and the Economy is the first comprehensive collection of scholarly essays to address these issues using the powerful framework of economics. Each chapter, written by an acknowledged expert or team of experts, reviews the key trends, surveys the relevant economic theory, and summarizes and critiques the empirical research literature. By providing a clear-eyed view of what we know, what we do not know, and what the critical unanswered questions are, this Handbook provides an invaluable and wide-ranging examination of the many changes that have occurred in women's economic lives.

"In *Career and Family*, Claudia Goldin builds on decades of complex research to examine the gender pay gap and the unequal distribution of labor between couples in the home. Goldin argues that although recent public and private discourse has brought these concerns to light, the actions taken—such as a single company slapped on the wrist or a few progressive leaders going on paternity leave—are the economic equivalent of tossing a band-aid to someone with cancer. These solutions, Goldin writes, treat the symptoms and not the disease of gender inequality in the workplace and economy. Goldin points to data that reveals how the pay gap widens further down the line in women's careers, about 10 to 15 years out, as opposed to those beginning careers after college. She examines five distinct groups of women over the course of the twentieth century: cohorts of women who differ in terms of career, job, marriage, and children, in approximated years of graduation—1900s, 1920s, 1950s, 1970s, and 1990s—based on various demographic, labor force, and occupational outcomes. The book argues that our entire economy is trapped in an old way of doing business; work structures have not adapted as more women enter the workforce. Gender equality in pay and equity in

home and childcare labor are flip sides of the same issue, and Goldin frames both in the context of a serious empirical exploration that has not yet been put in a long-run historical context. Career and Family offers a deep look into census data, rich information about individual college graduates over their lifetimes, and various records and new sources of material to offer a new model to restructure the home and school systems that contribute to the gender pay gap and the quest for both family and career"--

The 'triple overlap' refers to the link between gender stratification, the household and economic variables. In this volume, leading sociologists examine this overlap as a totality, providing theoretical concepts and new research on how the triple overlap works, both inside the family and within the broader context of society. Their competing conceptions of the interrelationship of gender, family and economy are bolstered by empirical papers which raise questions of culture, class and race within the contexts of both the developed and developing worlds. Six of the articles in this volume were previously published as a Special Issue of Journal of Family Issues.

This lucid, hard-hitting book explores a central paradox of the Japanese economy: the relegation of women to low-paying, dead-end jobs in a workforce that depends on their labor to maintain its status as a world economic leader. Drawing upon historical materials, survey and statistical data, and extensive interviews in Japan, Mary Brinton provides an in-depth and original examination of the role of gender in Japan's phenomenal postwar economic growth. Brinton finds that the educational system, the workplace, and the family in Japan have shaped

the opportunities open to female workers. Women move in and out of the workforce depending on their age and family duties, a great disadvantage in a system that emphasizes seniority and continuous work experience. Brinton situates the vicious cycle that perpetuates traditional gender roles within the concept of human capital development, whereby Japanese society "underinvests" in the capabilities of women. The effects of this underinvestment are reinforced indirectly as women sustain male human capital through unpaid domestic labor and psychological support. Brinton provides a clear analysis of a society that remains misunderstood, but whose economic transformation has been watched with great interest by the industrialized world.

This classic of feminist theory relates the evolution of women's economic reliance on men and the system's deleterious effects on both sexes. A landmark treatise in the struggle for gender equality.

This new edition of a classic feminist book explains how one of the great historical revolutions - the ongoing movement toward equality between the sexes - has come about. Its origins are to be found, not in changing ideas, but in the economic developments that have made women's labour too valuable to be spent exclusively in domestic pursuits. The revolution is unfinished; new arrangements are needed to fight still-prevalent discrimination in the workplace, to achieve a more just sharing of housework and childcare between women and men, and, with the weakening of the institution of marriage, to re-erect a firm economic basis for the raising of children.

The need for the creation of an enabling political, legal and economic environment for women within Turkey is rising. A growing concern is shown at the ethnic divisions and local discrimination against women, which have spilled over into the labor market. This book lends a supporting voice to the economic and social empowerment of women globally, focusing on the real causes and the unpredictable nature of the ongoing conflicts surrounding the issue. The authors bring to the forefront problems of development within various regions and the implementation of projects, which address the state of women, inequality and risks, that are inimical to their participation in the economy. Emphasis is laid on why women should be permitted access to the many opportunities in information technology and exchange, partnership growth and networking in this digital era. The oppressive policies of Turkey are scrutinized to unravel the dangers they pose to the corporate existence of women in the modern world. Furthermore, this book centers on the deliberation on regional politics and issues on gender and women ' s empowerment in modern Turkey whilst comparing with other countries. The work sheds light on salient issues and possible remedies within target countries and the concerted efforts made to create a reliable structure to discuss gender conflicts. Ample contributions from countries such as the US, Germany, Serbia, South Africa and United Kingdom are pivotal to comparing and examining the main debates. Addressing several global gender-related examples as well as Turkey ' s national principles, this book encourages full involvement of women and girls in deciding the fate of their country. This book serves as the rallying point of an array of informative and mind-expanding works of literature in regional studies, gender studies, migration economy, and area studies in

Gender inequality in the workplace persists, even in nations with some of the most progressive laws and generous family support policies. Yet the dimensions on which inequality is measured—levels of women's employment, number of hours worked, sex segregation by occupations and wages—tell very different stories across industrialized nations. By examining federally guaranteed parental leave, publicly provided child care, and part-time work, and looking across multiple dimensions of inequality, Becky Pettit and Jennifer Hook document the links between specific policies and aggregate outcomes. They disentangle the complex factors, from institutional policies to personal choices, that influence economic inequality. *Gendered Tradeoffs* draws on data from twenty-one industrialized nations to compare women's and men's economic outcomes across nations, and over time, in search of a deeper understanding of the underpinnings of gender inequality in different labor markets. Pettit and Hook develop the idea that there are tradeoffs between different aspects of gender inequality in the economy and explain how those tradeoffs are shaped by individuals, markets, and states. They argue that each policy or condition should be considered along two axes—whether it promotes women's inclusion in or exclusion from the labor market and whether it promotes gender equality or inequality among women in the labor market. Some policies advance one objective while undercutting the other. The volume begins by reflecting on gender inequality in labor markets measured by different indicators. It goes on to develop the idea that there may be tradeoffs inherent among different aspects of

inequality and in different policy solutions. These ideas are explored in four empirical chapters on employment, work hours, occupational sex segregation, and the gender wage gap. The penultimate chapter examines whether a similar framework is relevant for understanding inequality among women in the United States and Germany. The book concludes with a thorough discussion of the policies and conditions that underpin gender inequality in the workplace. The central thesis of *Gendered Tradeoffs* is that gender inequality in the workplace is generated and reinforced by national policies and conditions. The contours of inequality across and within countries are shaped by specific aspects of social policy that either relieve or concentrate the demands of care giving within households—usually in the hands of women—and at the same time shape workplace expectations. Pettit and Hook make a strong case that equality for women in the workplace depends not on whether women are included in the labor market but on how they are included.
